

SIX STEPS TO BETTER SECURITY

Protect accounts with strong authentication

Always enable two factor authentication (2FA), which requires an additional code to log in.

Keep software updated

Keep the operating system and security software up to date on all devices.

Avoid phishing attempts

Never click on a link or open an attachment in a message or email from someone you don't know.

Use unique passwords

Create strong passwords.
Learn how from ConnectSafely.org.

Protect mobile devices

Keep the operating system and security software up to date on your mobile device.

Use trusted security tools

Use tools and services to improve your security.
